[1] Reflects inception of the former Dynamic World Convertible Debentures Fund. [2] For the period ended 2024-06-30. [3] The yield is determined by annualizing the fixed distribution rate and does not include any distributions in excess of the fixed distribution rate that may be paid at the fund's year-end. [4] We review the amount of the distribution in January of each year. [5] Risk rating measures the degree of uncertainty that an investor can handle regarding fluctuations in the value of their portfolio. The amount of risk associated with any particular investment depends largely on your own personal circumstances including your time horizon, liquidity needs, portfolio size, income, investment knowledge and attitude toward price fluctuations. Investors should consult their financial advisor before making a decision as to whether this mutual fund is a suitable investment for them. [6] Not available for purchases, switches out only. [7] Returns generated prior to July 2006 refer to the former Dynamic World Convertible Debentures Fund. [8] Credit Profile excludes holding in Dynamic High Yield Bond Fund

Distributions may consist of net income, dividends, net realized capital gains, and/or return of capital. Distributions are not guaranteed and investors should not confuse a fund's distribution yield with its performance or rate of return.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus before investing.

The indicated rates of return are the historical annual compounded total returns including changes in units [share] value and reinvestment of all distributions [dividends] and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. The rates of return are used only to illustrate the effects of the compound growth rate and are not intended to reflect future values of the mutual fund or returns on investment in the mutual fund. Investments in mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.

R² is a measurement out of 100 that shows the extent to which a portfolio's movements can be explained by the benchmark's movements.
