INVESTMENT DISCIPLINE

- The Pool aims to provide low correlation to traditional asset classes, minimize downside risk and generate positive returns.
- The strategic asset mix is constructed by examining the correlation, volatility, and return streams among the strategies so that it behaves differently from traditional asset classes.
- Each strategy is allocated to a manager with distinct experience in their assigned mandate.

The benchmark used for analytics for this fund is **45% FTSE Canada Short Term Corporate Bond Index / 27.5% FTSE Canada 91 Day T-Bill Index / 15% Solactive GBS Developed Markets Large & Mid Cap Index (C\$) / 12.5% FTSE EPRA Nareit Developed Index.**

[1] For the period ended 2023-06-30. [2] We review the amount of the distribution in January of each year. [3] The yield is determined by annualizing the fixed distribution rate and does not include any distributions in excess of the fixed distribution rate that may be paid at the fund's year-end. [4] Risk rating measures the degree of uncertainty that an investor can handle regarding fluctuations in the value of their portfolio. The amount of risk associated with any particular investment depends largely on your own personal circumstances including your time horizon, liquidity needs, portfolio size, income, investment knowledge and attitude toward price fluctuations. Investors should consult their financial advisor before making a decision as to whether this pool is a suitable investment for them.

Dynamic Private Investment Pools offer affluent investors privileged access to preferential pricing combined with first-class, legitimately active investment management.

Commissions, trailing commissions, management fees and expenses all may be associated with investments in pools. Please read the prospectus before investing.

The indicated rates of return are the historical annual compounded total returns including changes in units [share] value and reinvestment of all distributions [dividends] and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. The rates of return are used only to illustrate the effects of the compound growth rate and are not intended to reflect future values of the pool or returns on investment in the pool. Investments in pools are not guaranteed, their values change frequently and past performance may not be repeated. R² is a measurement out of 100 that shows the extent to which a portfolio's movements can be explained by the benchmark's movements.

Standard deviation is a measure of volatility; it shows how broadly the Fund's returns have varied over a given time period.
